Product Engineer - Luminaires

BrainLit is delivering industry leading lighting solutions that improves the health and well-being of people. BrainLit is a fast-paced, expansive startup bringing to market the BioCentric Lighting™ system; an advanced, feedback-driven, self-learning system that creates natural light environments via a globally unique software patent. We are currently growing our teams and our business while preparing for tomorrow by developing our subsequent generation solutions. Do you want to be part of a cutting-edge development team, participate in growing a business while creating IT solutions that benefit the health and well-being people?

As Product Engineer - Luminaires, you will be responsible for the development of products and product families within the luminaire product category corresponding to what is set in the roadmap and the development strategy. This development is conducted through collaborative partners and supplier manufacturers. The main task is to project lead these activities from the client side, why project management and communication skills are vital to the task.

The successful candidate is highly organized and thorough; communicates clearly and constructively in speaking and writing; is multitasking, exhibits attention to detail and has a clear sense of urgency. We expect applicants with a technical education on bachelor level or higher or the equivalent work experience. We expect the applicants to have 2-5 years' work experience. We welcome female applicants to maintain a productive gender balance. For the right candidate there are opportunities to progress and develop significantly within the organization.

Responsibilities include:

- Project Management of multiple parallel short- and long-term projects with external partners.
- Writing and maintaining product and component specifications
- Ownership of QC and documentation
- Ownership of Product Revision Management
- Ownership of Certification regulations and corresponding documentation
- Contributing to Business Intelligence within the product category

- Contributing to Roadmap and development plans

Characteristics and experience

- Highly organized and thorough
- Excellent cooperative and communicational skills
- Product Development experience
- Fluent in English and Swedish. Both are daily working languages.
- Knowledge of optics, electronics, thermodynamics and mechanics
